Test Comments: This site was planted late April, about 36 hrs before cold wet weather arrived and dropped soil temps for several days.

Emergence was impacted slightly but final stands were very good. Overall rainfall was 1.4" above normal, but it all came in 9 big showers

spaced every 3 weeks or so, each dropping 1+" of rain. High winds just days before harvest caused varying degrees of hybrid specific lodging.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
