**Yield & Income Factors:** Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Prices: GMO = \$3.00; non-GMO = \$3.00

**Test Comments:** *Plenty of subsoil moisture at planting helped keep the crop growing when June and July rains became sparse. The yield outlook was grim in mid-July as pollination started with dry topsoils. Despite the mid-season crop stress, timely rains ended up delivering good yields. Ears were not huge, but kernels were deep and dense to boost yield. Nice to see 16% grain moisture in a slow drying year.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
