TEST COMMENTS:

Planting conditions this year were favorable to allow farmers in O'Brien county to make tremendous progress mid to late April. Most corn was in the ground by the end of April. Early season rainfall was adequate, stands were good, and the crop was up and had great vigor by mid-June. Everything was going well until the faucet shut off following pollination. The heat of mid-July and August was not relieved by enough precipitation to offset the moisture deficits that turned into the D3 (extreme drought) this county currently faces as of harvest. Yields were impacted by the dry weather during the last half of the season.
