TEST COMMENTS:

Plant standability was a big factor for farmers in this area. The severe weather of Aug 27-28 brought over 8.5" to this part of Dale's farm and nearby fields experienced close to 10". The wind that accompanied this storm laid several hybrids nearly flat and left others without hardly any lodging at all. There were big differences among hybrids in how they handled this storm resulting in yield differences between products that stood well and yielded excellently and those that couldn't be picked up at all. Standability among hybrids was very revealing. Farmers in the area have had to harvest several fields in one direction to deal with the down corn. Conventional hybrids were damaged by herbicide, so these results will not be reported in the region summary.
