TEST COMMENTS:

This fall strip-tilled site had a great seedbed at planting, and early growth was good. Rainfall was below average all year, but the biggest impact came on Aug 28 from 90+ mph wind storm. This wind created a "downdraft" in the field that severely lodged many plots, while leaving others untouched. Lodging scores will reflect the damage to the plants. I was able to harvest the plot so that the hybrids fed into the combine, allowing most stalks to be harvested. Full-season hybrids seemed to stand better, while the early hybrids had already started to sacrifice stalk quality because of drought when the wind storm hit.
