TEST COMMENTS:

Planting conditions were excellent here. We took stand counts on June 10; it was 95 degrees and humid, but the corn roots had not gotten down to find nitrogen yet. The plant color was much better 10 days later. Roots had to go deep in June, and this helped plants to get through the season. Greg noted that this field was lower yielding than other fields that were only a mile away, because this site received less rain. Plants were average height here vs. some fields where corn was 10' tall. Lodging was low, which was a nice way to finish harvesting FIRST corn plots for the year.
