HARVESTED - STAND:	Nov 1 27.7 /A

TEST COMMENTS:

This plot was planted into no-till oat ground this spring. On June 4, dry fertilizer was side-dressed and then had to wait for rain until June 11. The plot had good weed control and was standing well for harvest. We usually till the alleys between plots but decided to let them grow and harvest them separately this year. We wanted to discourage deer and other wildlife from passing through, causing damage that has been common in past years. It seemed to help. The early-season test was on higher ground and dried out worse in the early season. The early-season test was rejected due to yield variation.
