TEST COMMENTS:

We were very glad to work with Evan and the local coop to host the plot this season, while also providing a learning experience for the high school FFA chapter about field research, corn development, agronomy, and a presentation of the many different corn hybrids that farmers have to choose from. Every year has its own challenges, and this season, drought was a big factor the crops of northwest Iowa had to deal with. Typically, the deep Galva and Primghar soil types that represent this area hold water pretty well and can endure dry periods. Considering a precipitation deficit of 7.4" below the 10-yr average from planting through maturity, hybrids at this site had an opportunity to demonstrate resilience in the dry conditions experienced here this year.
