### TEST COMMENTS:

*This is another site where extremes on both ends of the spectrum shaped the outcome of the crop. On the day of planting we pushed to beat a predicted rain event and as we were pulling out of the field it began to rain. Bob said that they received as much of their annual precipitation all consolidated into the months of March-July, with a dry finish to the season. This area is also consistently windy, and with a fast dry down the stalks became more brittle and were more prone to lodging as noted in the ultra-early and full-season tests. Overall, the rain made a nice yield for this plot while the faster dry down coupled with wind made it a bit more challenging to harvest.*
