### TEST COMMENTS:

*It was a year of opposites for Jeff Loehr on his Webster County farm. This landscape is relatively flat with small rolling undulations. In a normal year, the lower ground typically would produce more bushels, but as Jeff stated, it was the opposite. The tops of the rolling knobs were more productive this year. This area also received a tremendous amount of precipitation mostly in March-July. It is possible that some of the lower spots in the field had more hypoxic conditions than the more well-drained higher ground. This variation was present yet the yields were favorable. This plot produced similar to the surrounding field average of 244 bu/ac.*
