PREVENTATIVE MAINTENANCE INSPECTIONS (PMI) | PURCHASED PER DRONE | OPTIONAL

\$ 2,500

All PMI's are conducted at Titan Pro in Clear Lake, IA. The customer is responsible for all shipping costs.

The PMI is estimated to take 10 hours of time and includes a thorough inspection and detail. Titan Pro will test all hardware, software, and cosmetic features. A test flight will be conducted to deem the drone(s) fit to fly. All PMI's will be performed at Titan Pro in Clear Lake, IA.

Service invoices must be paid prior to pickup or delivery.

Refer to the Terms & Conditions for additional information.

TERMS & CONDITIONS

TRAINING PACKAGES

Packages are required to be purchased once per organization (not per drone). If additional team members from your operation need to be trained in the future, an additional training package must be purchased. The Sky High package is highly recommended for all new pilots who have never flown an agrodrome. This package will provide the most in-depth training and will give customers the confidence needed to take their crop protection application to new heights.

SERVICE RATE | All Services Are Completed By A Certified Hylío Technician

The customer is responsible for the cost of the parts. All service repairs to be made at Titan Pro. Customers will be responsible for dropping off AND picking up their drone after the repair is complete. Titan Pro can assist with scheduling your drone to be picked up by an LTL carrier. It is your responsibility to ensure the drone is packed securely for transport. For additional shipping details and packaging instructions, please email: josephencinias@titanprosci.com. Payment will be collected after repairs are recorded. The drone will not be released until the invoice has been paid in full. A fee of \$250 per drone per pallet spot will apply on a monthly basis starting 30 days after the repair estimate or invoice is sent to the end user. All unairworthy drones that are dropped off for repairs without a full crate will automatically count as 2 pallet spots.

IMPORTANT WARRANTY INFORMATION

In the manual, components highlighted in yellow will void the UAS warranty if repaired or replaced unless the work is completed by, or under the supervision of a certified Hylío Technician. Any customer is allowed to perform repairs by themselves, if they wish, as long as the repair is authorized under the "Component Information" in the "Hylío Maintenance Manual". Unsupervised replacement of most parts not on the list will also void warranty. As a rule of thumb, if the center cover needs to come off, it will be a warranty void repair.

PREVENTATIVE MAINTENANCE INSPECTIONS (PMI)

The Preventative Maintenance Inspection can be performed at anytime of the year. Inspections are priced per drone, per PMI, and are optional. Customers have the option to accept or deny any issues that are found during inspection. If the customer wants the repairs fixed, the hourly rate is based on the Titan Pro shop rate. The customer is responsible for the cost of parts. Payment will be collected after repairs are recorded. Titan Pro's certified Hylío Technician recommends at least 1 annual PMI per drone. The drone will not be released until the invoice has been paid in full. A fee of \$250 per drone per pallet spot will apply on a monthly basis starting 30 days after the repair estimate or invoice is sent to the end user. All unairworthy drones that are dropped off for repairs without a full crate will automatically count as 2 pallet spots.
